Abstract:

Glow Beauty is a beauty and skincare website created as our final project. The website is based on a natural skincare theme and includes five main products: Glow Beauty Daily Cleanser, Glow Beauty Boost Serum, Glow Beauty Daily Sunscreen, Glow Beauty Hydro Moisturizer, and Glow Beauty Smooth & Shine Shampoo. For this project, we used the basic HTML, CSS, and JavaScript we learned in class. We also researched skincare products and different product photo ideas to create a suitable natural look for the website. The three group members worked on different parts of the project and later combined their work to create the final website. Although we faced some problems while running the website at first, we worked together to solve them. In the end, we were able to complete a simple but attractive website that presents our skincare products.

Introduction:

Beauty and skincare products are widely used in everyday life, and many brands present their products online. This gave us the idea to create our own beauty and skincare website for the final project. Our website is called Glow Beauty and focuses on a natural skincare theme. We selected five products for our website: Glow Beauty Daily Cleanser, Glow Beauty Boost Serum, Glow Beauty Daily Sunscreen, Glow Beauty Hydro Moisturizer, and Glow Beauty Smooth & Shine Shampoo. The main objective of this project was to use the basic HTML, CSS, and JavaScript we learned in class to create a working website. We also wanted to make the website simple, organized, and visually appealing. Another objective was to work together as a group and combine our individual work into one complete project.

Methodology:

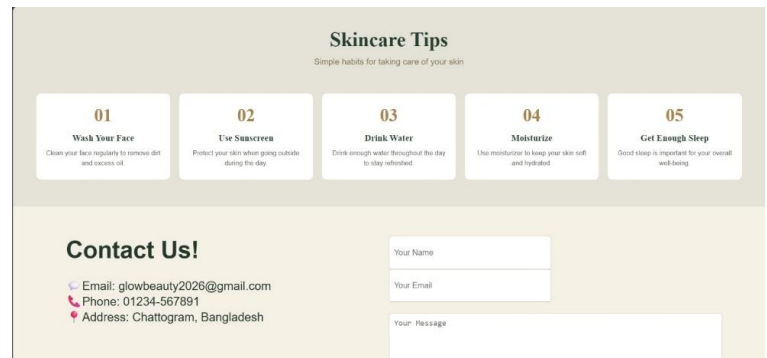

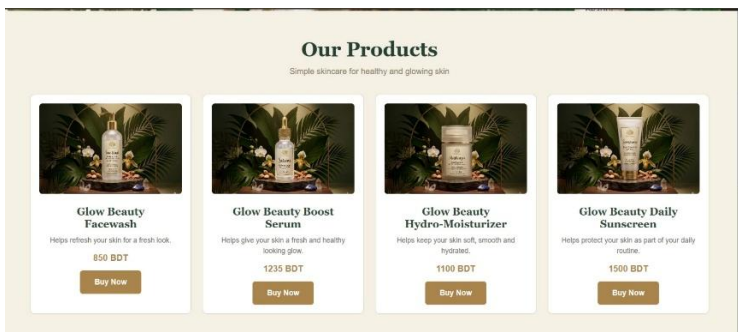

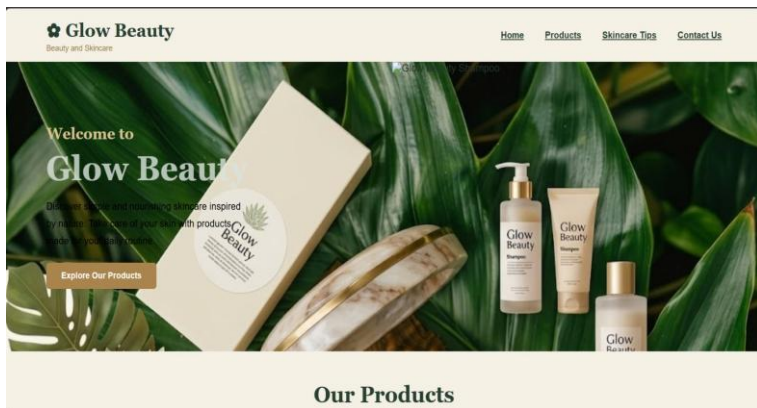

First, we discussed our project idea and decided to create a beauty and skincare website. After choosing the name Glow Beauty, we selected the five products that would be included on the website. Sutapa and Shreyosi researched different skincare products and looked for product and photo inspiration to decide the overall style of the website. We wanted the products and pictures to have a natural skincare feeling. Then, we divided the work among the group members. Sutapa worked on the HTML part and created the basic structure and content of the website. Tasmia worked on the CSS part and designed the appearance of the website. Shreyosi worked on the JavaScript part and also prepared the project report. For the product pictures, Shreyosi used the inspirations found through research and Google and created the product images with the help of Gemini AI. After completing our individual parts, we combined the HTML, CSS, JavaScript, and product images to create the final website. We then tested the website and made changes when problems appeared.

4. Output

The final result of our project is a working beauty and skincare website called Glow Beauty. **The website presents our five main products:**

- Glow Beauty Daily Cleanser
- Glow Beauty Boost Serum
- Glow Beauty Daily Sunscreen
- Glow Beauty Hydro Moisturizer
- Glow Beauty Smooth & Shine Shampoo

Each product is shown with its name, description, and price. We used product images with a natural style to match the theme of the website. The final website is simple but organized and visually appealing. After solving the problems we faced during the project, we were able to make the website run properly.

Challenges and Limitations:

The main challenge we faced was that the website was not running properly at first. We had already created the different parts of the website, but when we tried to run everything together, there were problems and the website did not work as expected. We had to check the files and code again to find the problems. Shreyosi and Sutapa worked until around 3:00 AM trying to solve the issues and make the website run properly. We kept checking, making changes, and testing the website until we were able to solve the problems. This was one of the most difficult parts of our project, but working through the problem helped us complete the final website. As for limitations, the website is still simple and only includes the features we were able to create using our basic knowledge. Users can view the products and their information, but they cannot actually purchase products or make payments through the website.

Conclusion and Discussion:

In conclusion, we successfully completed our project, Glow Beauty-Beauty & Skincare Website. We created a website based on a natural skincare theme and included five different products. Through this project, we were able to use the basic HTML, CSS, and JavaScript we learned in class. Each group member was responsible for different parts of the project, and then we worked together to complete the final website. We also faced difficulties when the website was not running properly. However, we continued working, found the problems, and finally made the website run successfully. Overall, we were able to create a simple but nice website and complete our project through teamwork.

Future Work:

In the future, more products can be added to the Glow Beauty website. We can also add more information about each product. Other features, such as a search option, product reviews, and a shopping cart, could be added as we learn more. The design can also be improved further, and more functions can be added to make the website more useful.

Individual Contributions:

Shreyosi

Shreyosi worked on the JavaScript part of the website and prepared the project report. She also researched skincare products and product and photo inspiration together with Sutapa. Based on the inspirations found through research and Google, she created the product images for Glow Beauty with the help of Gemini AI. She also worked with Sutapa to solve the problems when the website was not running properly.

Sutapa

Sutapa worked on the HTML part of the website and created the main structure and content. She also researched skincare products and product and photo inspiration together with Shreyosi. During the final stage of the project, she worked with the group to combine the different parts of the website. She also worked with Shreyosi until around 3:00 AM to find and solve the problems that were stopping the website from running properly.

Tasmia

Tasmia worked on the CSS part of the website. She was responsible for styling the website and helping create its overall appearance. She worked on making the website look organized and attractive. She also worked with the other group members during the final stage of the project to complete the website.

Group Contribution

Although each member had different responsibilities, everyone worked together to build the final website. We discussed the project idea, shared suggestions, and helped each other when needed. After completing our individual parts, we worked together to combine everything and create a simple but nice website.
